

PART THREE: HOUSING INFRASTRUCTURE

This part presents detailed characteristics of Rhode Island's housing infrastructure. Most category headings should be self-explanatory, but some may require definition or clarification. Three tables present counts of housing units by type of heating fuel, source of water, and type of sewage disposal system. The following definitions were used by the Census Bureau to compile and tabulate the data:

Home heating fuel represents the type of fuel used *most* to heat the dwelling.

A common source supplying water to five or more units is classified as a "public system" or "private company." The water may be supplied by a city, county, water district, water company, etc., or it may be obtained from a well which supplies water to five or more housing units. If the water is supplied from a well serving fewer than five housing units, the units are classified as having water supplied by either an "individual drilled well" or an "individual dug well." The category "some other source" includes water obtained from springs, creeks, rivers, lakes, cisterns, etc. The 2000 census did not collect data on source of water. Data reported from the 1990 census is the most current information available.

Housing units are either connected to a public sewer, a septic tank or cesspool, or are served by other means not specified. A public sewer may be operated by a government entity or a private organization. A housing unit is considered to be connected to a septic tank or cesspool when the unit is provided with an underground pit or tank for sewage disposal. The 2000 census did not collect data on sewage disposal systems. Data reported from the 1990 census is the most current information available.

The National Flood Insurance Program reports that 11,437 flood insurance policies averaging \$152,281 in insurance coverage, are in effect in Rhode Island as of 2002. Payments on claims filed on Rhode Island properties in 2002 total \$19,196,061. The table presenting National Flood Insurance data by city and town for 2002 is accompanied by a map depicting Flood Hazard Areas within the 100 year flood zone for the State of Rhode Island.

A table appearing in this publication for the first time presents data relating to Rhode Island's farms and farmland. This table traces changes in the number of farms, total farmland, and average size of farms in five-year intervals from 1987 to 1997.

Another new table provides information on State Aid to Cities and Towns through the Distressed Communities Relief Program, General Revenue Sharing, Payments in Lieu of Tax Exempt Property, and Public Service Corporations Tax.
